PROFESSIONAL SUMMARY

Cybersecurity student focused on SOC operations, cloud security, and detection engineering with experience building AWS based security monitoring systems and AI assisted incident triage platforms.

TECHNICAL SKILLS

Networking: TCP/IP, OSI, DNS, DHCP, VLANs, VPN, IPSec, TLS/SSL, HTTP/S, SMTP, NAT, firewalls

Systems & Linux Administration: Linux administration, Bash, Windows Event Logs, Sysmon, Active Directory, AD/LDAP, Kerberos, system hardening

Vulnerability Assessment & Security Testing: Burp Suite, Nessus, Nmap, Metasploit, sqlmap, FFUF, BloodHound, Impacket, OWASP Top 10, CVSS reporting

SIEM & Security Operations: Microsoft Sentinel, Splunk, Wazuh, ELK/OpenSearch, Microsoft Defender, KQL, SPL, alert triage, threat hunting, incident response

Programming & Automation: Python, Bash, PowerShell, SQL

Cloud Security & DevOps: AWS IAM, CloudTrail, CloudWatch, EventBridge, Lambda, AWS Config, S3, EC2, Docker, cloud misconfiguration detection

Security Frameworks & Forensics: NIST CSF, NIST 800-61, MITRE ATT&CK, Cyber Kill Chain, Autopsy, FTK Imager, Volatility, TheHive, MISP

WORK EXPERIENCE

TEXIAL | Cybersecurity Intern

March 2026 - Present

- Performed web and network security assessments using **Burp Suite, Nmap, Nessus, Metasploit, and Wireshark**; documented validated findings with risk, impact, and remediation steps.
- Supported ethical hacking across **OWASP Top 10**, authentication flaws, exposed services, and **Linux/AD misconfigurations** using **Kali Linux** and exploitation validation workflows.
- Monitored and triaged events in **Splunk, Microsoft Sentinel, Wazuh, and Microsoft Defender**; mapped alerts to **MITRE ATT&CK** and escalated high-risk activity.
- Built detection queries and incident notes from **Windows Event Logs, Sysmon, CloudTrail, and firewall logs** to support SOC investigations and response playbooks.

PROJECTS

SOC-ASTRA | RAG, LangChain, Milvus, Docker, Flask, SQLite | [GitHub](#)

Aug 2025 - Nov 2025

- Built an AI-assisted SOC triage platform using **GPT-4, LangChain, Milvus, Flask, and SQLite** for real-time security log analysis.
- Implemented **RAG context retrieval** with **Milvus vector search** and **IP behavioral profiling** to correlate alerts with historical incidents.
- Developed **queue-based log processing** with worker threads to normalize events, classify severity, score confidence, and enrich incidents.
- Mapped detections to **MITRE ATT&CK** and extracted **IOCs, recommendations, escalation signals, and analyst-ready summaries**.
- Simulated **brute force, credential dumping, lateral movement, malware execution, port scanning, and exfiltration** events to validate detection coverage.

AWS DefenderX | AWS, FastAPI, DynamoDB, Elastic/Kibana | [GitHub](#)

Jan 2026 - May 2026

- Built an **AWS cloud security monitoring dashboard** public **S3 exposure, unrestricted security groups (0.0.0.0/0), disabled MFA, root account usage, unencrypted EBS volumes, and overly permissive IAM policies**.
- Implemented automated monitoring with **CloudTrail, EventBridge, Lambda, DynamoDB, AWS Config, and Secrets Manager** for findings collection and storage.
- Generated **OpenAI risk summaries** to explain cloud misconfigurations, likely attack paths, and remediation guidance for SOC triage.
- Added integrations with **Splunk, Elasticsearch/OpenSearch, Wazuh, Suricata, and Falco** for forwarding security alerts into enterprise security tools.
- Supported local demo and AWS deployment using **Python, Docker, Elasticsearch, Kibana, AWS CLI/SAM, and API Gateway**.

CERTIFICATIONS

- Certified Ethical Hacker** (EC-Council)
- CompTIA Security+** (Pursuing)
- Microsoft SC-200** (Pursuing)

EDUCATION

Bennett University | B.Tech in Computer Science Engineering (Cyber Security)

Aug 2023 - Apr 2027 Expected

Relevant Coursework: Linux & Shell Scripting, System & Network Security, Ethical Hacking & Penetration Testing, Digital Forensics

ACHIEVEMENTS

- Secured 3rd place in Bennett Project Expo 2025 for showcasing SOC-ASTRA.
- Active TryHackMe learner across SOC, penetration testing, and cloud security labs.
- Built personal cybersecurity labs and tools including a steganography tool, Python vulnerability Scanner, Python based KeyLogger and Wi-Fi de-authentication testing tool.
- Actively publishing blogs related to current trends, my experience and learnings on Medium.
